About Me

Software engineer with 10+ years building production systems across backend services, data platforms, DevOps, and analytics. Experienced leading Agile teams, mentoring engineers, and delivering practical solutions that improve reliability, delivery speed, and business outcomes.

Technical Skills

Programming Languages
Go, Java, Python, C/C++, C#, VB.NET, TypeScript, Javascript, Kotlin

Application Development
Node.js, .NET, REST APIs, SOAP, Microservices, System Design, Embedded Software Systems Design

Cloud, DevOps & Delivery
AWS, Azure, Docker, Docker Swarm, Kubernetes, Terraform, Jenkins, Chef, ADO, CI/CD, Agile / Scrum

Data Engineering & Databases
PostgreSQL, MongoDB, SQL Server, Oracle, PL/SQL, Stored Procedures, ETL, SSIS, SSMS, Kafka, Redis

Experience

Principal AI Software Engineer

Nov 2025 - Present

Northrop Grumman

Clearance Level: Secret

- **Research & Development:** Lead key internal R&D projects to attract new business and expand the Defense Systems sector's product portfolio.
- **Product Modernization:** Advance product modernization by introducing modern and emerging technologies to programs in sustainment.
- **Business Development & Proposals:** Collaborate with key stakeholders, internal business development teams, and military personnel to identify mission-critical needs and develop proposals that support program expansion.

Software Systems Engineer

May 2022 - Oct 2025

HP Inc.

- **Agile Leadership:** Led Scrum execution for cross-functional roadmap delivery, keeping releases aligned with stakeholder commitments.
- **Training & Mentorship:** Mentored interns and junior engineers, cutting onboarding time by 50% and improving team productivity.
- **Stakeholder Planning:** Converted business requirements into scoped engineering plans and delivery estimates.
- **Platform Engineering:** Built ETL pipelines and Go and Python microservices while optimizing PostgreSQL and MongoDB schemas for scale and reliability.
- **Product Analytics:** Built Tableau, Power BI, and Mongo Charts dashboards that informed campaign strategy and increased customer engagement by over 75%.

Software Engineer

Jul 2019 - Apr 2022

Kaiser Permanente

- **Product Delivery:** Led delivery of ML-assisted diagnosis products, including SmartTriage, across application, data, and deployment workflows.
- **Business Impact:** Helped reduce patient wait times by more than 50%, improving throughput for care teams.
- **DevOps:** Implemented CI/CD and deployment workflows with Docker, Docker Swarm, Chef, and Jenkins to reduce release friction.
- **Software Engineering:** Built Java services and REST APIs that streamlined patient data processing and third-party integrations.
- **Process Optimization:** Improved schema design and ETL workflows, cutting build and deploy time by 50%.

Software Developer

Nov 2017 - Jun 2019

Fast Enterprises, LLC

- **Revenue Impact:** Built the Carfax daily reporting workflow, generating over $200,000 in annual recurring revenue for the Arkansas State Department of Finance and Administration.
- **Database Performance:** Tuned SQL queries in a high-transaction production system, reducing server blocking by 50%.
- **Production Support:** Resolved 100+ production issues for the Arkansas Department of Finance and Administration, improving system stability.

Analyst, Marketing Campaign

Oct 2016 - Oct 2017

PennyMac Loan Services, LLC

- **Process Optimization:** Fixed telephony database routing defects, reducing reporting mismatches to 0.1% and cutting runtime by 50%.
- **Database Reporting:** Built stored procedures and reporting used by sales and marketing leaders for trend analysis and planning.
- **Campaign Management:** Developed targeted, data-driven campaigns that improved marketing efficiency and audience segmentation.

Projects

HP AI Studio

- Built backend APIs and microservices in Go for an AI workstation platform supporting model development and deployment workflows.
- Delivered product analytics dashboards in Tableau and Mongo Charts to surface usage trends and guide product decisions.

SmartTriage

- Supported end-to-end delivery of an ML-assisted patient intake platform used for urgent care and telehealth workflows.
- Built DevOps pipelines, ETL and schema components, REST APIs, and Java microservices that managed questionnaire flow and responses.

nQuiry

- Supported DevOps for an NLP platform used to analyze EMR history and clinical notes for physician workflows.
- Troubleshot a legacy orchestrator and maintained regression runs through a DAG-based scheduler similar to Airflow.

AIRS DSMV

- Supported a high-volume state motor vehicle platform, resolving 100+ submission and production issues.
- Implemented REAL ID requirements and improved query performance in a transaction-heavy SQL Server environment.

Education

Bachelor of Science in Computer Science

2015 - 2017

Oregon State University, Corvallis

Bachelor of Science in Criminal Justice

2009 - 2012

California State University, Thousand Oaks
